

# APPLICATIONS

## ANALYSIS OF STYRENE AND ISOPRENE BLOCK COPOLYMERS BEFORE AND AFTER FLUORINATION

Dr. Jimmy Mays' group from the Department of Chemistry at the University of Tennessee, Knoxville, is synthesizing and characterizing the bulk morphology of fluorinated and sulfonated block copolymers. Well-defined block copolymers of sulfonated polystyrene-*b*-fluorinated polyisoprene (sPS-*b*-fPI), Figure 18, were synthesized by anionic polymerization followed by fluorination and sulfonation<sup>3</sup>.

The EcoSEC GPC System, equipped with TSKgel SuperMultipore® columns, was then used to determine the number-average molar mass,  $M_n$ , and the polydispersity index, PDI, of sPS-*b*-fPI, as well as that of the precursor polymer (PS-*b*-PI), Table 7. As seen in Figure 19, complete analysis of sPS-*b*-fPI was obtained in less than 10 minutes with excellent resolution using the EcoSEC GPC System.

## TSKgel GPC COLUMNS

### SEMI-MICRO COLUMNS

Tosoh introduced its first line of GPC columns in 1971. Ever since, Tosoh scientists have made important contributions to advances in polymer analysis by developing state-of-the-art GPC columns for the most demanding applications.

**Semi-micro columns are the TSKgel columns of choice for use with the EcoSEC GPC System.** They are referred to as such since their dimensions are smaller than conventional columns in terms of internal diameter as well as in length: 4.6 mm or 6 mm ID x 15 cm vs. 7.8 mm ID x 30 cm.

### GPC COLUMNS FOR POLYMERS SOLUBLE IN ORGANIC SOLVENTS

#### Semi-micro columns\* (4.6 or 6.0 mm ID x 15 cm)

- TSKgel SuperMultiporeHZ columns
- TSKgel SuperHZ columns for ultra-low adsorption
- TSKgel SuperH columns for low adsorption

#### Conventional columns (7.8 mm ID x 30 cm)

- TSKgel H<sub>XL</sub> columns for ultra-low adsorption
- TSKgel H<sub>HR</sub> columns for low adsorption;  
max temp. 140°C

\*EcoSEC GPC System recommended columns

### GPC COLUMNS FOR POLYMERS SOLUBLE IN POLAR ORGANIC SOLVENTS

#### Semi-micro columns\* (6.0 mm ID x 15 cm)

- TSKgel SuperAW columns

#### Conventional columns (7.8 mm ID x 30 cm)

- TSKgel Alpha columns

\*EcoSEC GPC System recommended columns

### GPC COLUMNS FOR POLYMERS SOLUBLE IN AQUEOUS SOLVENTS

#### Semi-micro columns\* (6.0 mm ID x 15 cm)

- TSKgel SuperMultiporePW columns

## MULTI-PORE TECHNOLOGY

Prior to the introduction of TSKgel SuperMultiporeHZ columns, scientists separating polymers with a wide range of molar masses were left with two options. One option is to use multiple columns of different pore sizes linked together in series. A second is to use a column packed with a mixed-bed resin of different pore sizes at an optimized mix ratio. However, problems can occur with both of these methods, which include distortion of the chromatogram or deviations between the actual calibration curve and the calibration curve approximated from data obtained from the molar mass standards.

As is shown in Figure 20, a novel approach to solve this problem was developed by Tosoh scientists and is incorporated in TSKgel SuperMultiporeHZ columns. These columns are packed with small particles of uniform size synthesized with a broad distribution of pore sizes. This novel approach creates a linear calibration curve within each particle. Therefore, columns with an extended linear calibration curve can now be prepared without mixing particles of different pore sizes. Their small ID (4.6 mm ID) and length (15 cm) reduces solvent consumption, results in quick run times, and offers high throughput capabilities.

## COMPARISON OF TSKgel SuperMultiporeHZ-M AND TSKgel SuperHZ COLUMNS FOR THE SEPARATION OF ACRYLIC RESIN

Figure 22 demonstrates that inflection points are no longer observed with columns packed from particles prepared by multi-pore technology.

# TSKgel COLUMNS AND STANDARDS

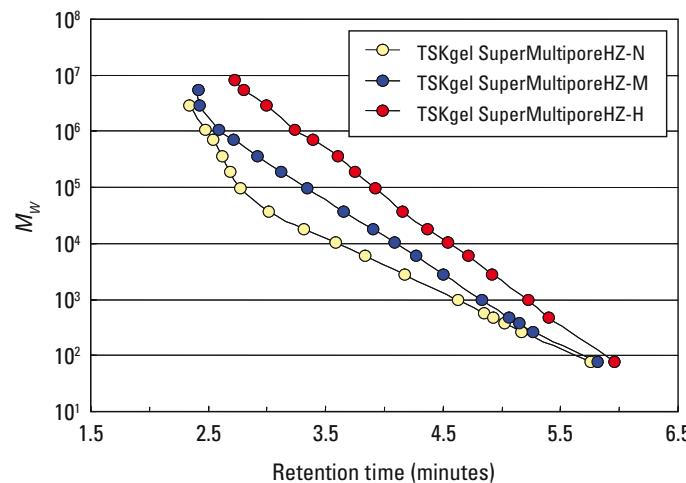

## TSKgel SuperMultiporeHZ COLUMNS

TSKgel SuperMultiporeHZ columns combine ultra high performance GPC columns with low dead volume (4.6 mm ID x 15 cm) and feature multi-pore particles with a wide pore size distribution. The use of the multi-pore technology ensures that the calibration curves have excellent linearity. There are three columns available within the TSKgel SuperMultiporeHZ columns, each with a different particle size, separation range, and exclusion limit. These columns can separate and characterize polymers within a wide molar mass range.

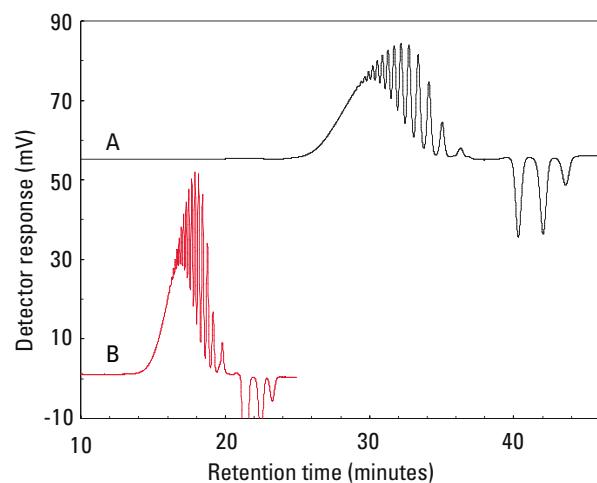

As demonstrated in Figure 23, the TSKgel SuperMultiporeHZ columns have a highly linear calibration curve with a shallow slope, which indicates excellent reproducibility across various average molar mass values.

The TSKgel SuperMultiporeHZ-N columns provide the same or higher resolution at a much shorter analysis time than multiple columns linked together, as shown in Figure 5.

## PStQuick GPC POLYSTYRENE CALIBRATION STANDARDS

PStQuick polystyrene calibration standards contain pre-mixed quantities of polystyrene polymers in autosampler vials for the calibration of GPC columns. Addition of solvent is all that is required for easy preparation and analysis.

12 different kits containing polystyrene polymers of various molar masses are available. Of the 12 kits, 9 are individual kits, each containing 3 to 5 polystyrene polymers. The remaining 3 are composite kits containing 2 or 3 of the individual kits.
