LARGE VOLUME PURGE SYSTEM

Designed for measurement of larger volume samples (> 100 □L), the Large Volume Purge System has about twice the volume of the original purge system and permits measurements of nanomolar levels of NO and its reaction products without the need to frequently change the reagent. Current users of the original purge system can upgrade to the larger volume system by purchasing the large purge vessel glassware only (CASM 03293-01).
Part Number: CASM 03297-01
